3. In the state of Percentia, each one of the 15 million voters voted for one of the two presidential candidates, Archimedes and Euclid. Archimedes received 750 more votes than Euclid. What percentage of the 15 million votes was for Euclid? Give your answer in decimal form with as many significant digits as needed.

4. Note that  $6 = 2^2 + 1^2 + 1^2$  and  $13 = 3^2 + 2^2 + 0^2$ . So 6 and 13 can each be written as the sum of the squares of three integers. How many positive whole numbers smaller than 25 can be written as the sum of the squares of three integers?

5. Adam, Bob and Charlie were hungry, so they each wanted to buy a sandwich, but none of them had enough money. Adam was short \$0.20, Bob was short \$0.30, and Charlie was short \$0.50. They pooled their money and bought two sandwiches. They were left with a total of \$1.20. How much money (in dollars) did Bob start out with?  
Express your answer using decimal notation.

6. A bakery supplies four different types of cakes: chocolate, strawberry, vanilla, and cheese. All cakes are baked in square pans of height of 5 cm .  
Chocolate cake is baked in a 15 cm by 15 cm pan, and it is cut into 3 equal pieces.  
Strawberry cake is baked in a 18 cm by 18 cm pan, and it is cut into 4 equal pieces.  
Vanilla cake is baked in a 20 cm by 20 cm pan, and it is cut into 5 equal pieces.  
Cheese cake is baked in a 24 cm by 24 cm pan, and it is cut into 8 equal pieces.  
Find the volume (in  $cm^3$ ) of the largest piece (of any of the four above cakes) that can be served.
